Application/Control Number: 10/705,575

Art Unit: 3676

DETAILED ACTION

Claim Rejections - 35 USC § 102

- 1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
 - A person shall be entitled to a patent unless -
 - (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by

 Armstrong, US Patent 3,552,295. A control knob assembly for use on a vane 22 of
 an air vent that directs airflow into a vehicle's passenger compartment wherein said
 vane includes a front being closest to the passenger compartment and a rear edge
 being furthest away from the passenger compartment, said rear edge having a
 notched portion formed therein, said control knob assembly comprising a knob
 portion 52 having an inner surface, said knob portion allows a user to manipulate
 the vane to a desired position; a side having an open portion dimensioned to
 receive the vane in snap fit engagement into said inner surface of the knob portion;
 and a compressively resilient pad 66 dimensioned to be received into said notched
 portion (see figure 2) formed at the rear edge of the vane and to extend outwardly
 beyond the rear edge to contact a first portion of said inner surface, said

Art Unit: 3676

compressively resilient pad being operative to consistently urge the front edge of the vane into contact with a second portion of the inner surface of the knob portion.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 2-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Armstrong. Armstrong discloses the claimed invention except for explicitly teaching the claimed materials for the resilient pad. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have selected such materials, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416. See also *Ballas Liquidating Co. v. Allied industries of Kansas, Inc.* (DC Kans) 205 USPQ 331. Such modifications are not critical to the design and would produce no unexpected results.

Art Unit: 3676

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark A. Williams whose telephone number is (703) 305-3438. The examiner can normally be reached on Monday through Friday.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
